Dont Jump, Transition.

Dimensions Voice Hybrid Cloud

Jumping to a new communications platform in a single hop might be unmanageable for your clients where maintaining business continuity is essential.

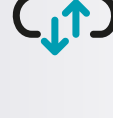

Making the move to a cloud-based communications platform can be a complex task, ensuring that all the services your staff and clients rely on, are always accessible – with no down time.

Migrate At Your Own Speed

Dimensions provides a flexible migration solution through seamless desk-to-desk dialling and compatibility with both cloud and legacy systems.

By using a phased approach, it simplifies staff training, minimises risk and reduces cost, enabling customers to progress at their own pace.

True Pathway to the Cloud

Dimensions Voice is different, providing a true pathway to the cloud.

Using the Dimensions 'Hybrid Cloud' Platform, any legacy SIP-enabled PBX can be directly connected to your new Dimensions platform. This provides an integrated solution which allows customers to migrate users and services at their own pace.

Reuse Your Existing Hardware

Providing a new telephony platform doesn't have to mean replacing all the hardware.

With Dimensions Voice, any SIP enabled handset or softphone can be connected to our cloud platform. This means engineering labour time is minimised.

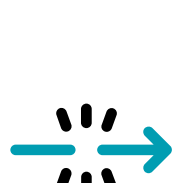

Your Clients will benefit from:

A more cost-effective solution

Minimal training by retaining a device they are familiar with

Minimal disruption with hardware swap outs

Super-fast transition from old platform to Dimensions

Book a Demonstration

Make it easy to migrate your clients to the cloud so that you can maximise your potential.

Bring together all the tools you need to offer your customers the most complete and versatile cloud voice solution on the market.

Book a demonstration today.
